ROSES

**' ' THE BEST OF THE NEW
AND OLD FAVORITES TOO! ' '**

A carefully selected list of choice varieties, that trial gardens and past seasons have proven the best for our climate -- chosen for fragrance, profusion of bloom, good habit of growth, as well as the perfection of the individual flowers.

Our Northwest climate is especially adapted to the growing of roses. In fact the blooms are more profuse, of better color, and last longer than in any other part of America. Rose bushes may be set out at any time during the winter or early spring. December, January and February are best, but bushes may also be set out in March or April. If it is later than this, Malmo Roses are available growing in containers in Rose soil for all Summer planting.

DRESS UP YOUR GARDEN

Add spice and glamour to your rose beds. Plant some of the newer varieties. Rose hybridizers have produced many new roses that are stronger-growing, with exquisite blends and new tones of color, more fragrant, and freer blooming. Try these new creations in your garden. They will surprise and delight you. *To aid you in their selection, they are marked in the list with an asterisk*.

WRONG

CULTURAL HINTS

When planting roses, spread out the roots over a mound of topsoil, with the bud or basal branching point barely under the surface. Work soil in around the roots and firm by tamping. The proper root requirements are a rich garden soil, preferably worked two feet deep. Mix in well-rotted manure or Malmo Organic Fertilizer.

RIGHT

Roses like plenty of water. Flood the beds once a week by placing the hose on the bed and letting it run slowly so that the water may soak deep to the roots. Spent blooms should be removed, cutting the stem above the first complete set of five leaves, in order to induce more blooms. If long stemmed roses are wanted, cut so that only two sets of leaves remain on the stalk.

Result of close pruning. Low, compact — large flowers.

The result of high pruning. Bare legs — tall growth.

A Hybrid Tea rose pruned low in spring.

A Hybrid Tea Rose pruned high in spring.

POLYANTHA ROSES

The Polyantha or Baby Roses form shapely, compact bushes 12 to 18 inches high. Their great mass of bloom all season make them excellent for edging or bedding purposes.

CAMEO: Shell pink with salmon suffusion, touched with a glow of gold.

CECILE BRUNNER: Perfect pink buds. The 'Sweetheart' Rose. \$1.25.

GLORIA MUNDI: Brilliant orange scarlet, prolific and unfading.

*PINKIE: Slender pink baby rose buds open to fully double two inch flowers. Free blooming, fine for corsages. \$2.00.

RED RIPPLES: An intense sparkling red, shapely long buds. \$1.25.

FLORIBUNDA ROSES

The floribunda or large flowered cluster roses are like dainty miniature Tea Roses, exquisite individually. Their hardiness and long prolific bloom make them fine for mass plantings. Usually taller than the polyantha roses.

*BETTY PRIOR: (Pat. 340) Sparkling red buds in clusters, opening shell pink, resembles a Pink Dogwood. Strong growing, floriferous. \$1.00.

*DONALD PRIOR: (Pat. 377) Immense clusters of wine-red non-fading flowers very free blooming. Attractive foliage. \$1.00.

ELSE PAULSEN: Medium size, semi-double, bright rose pink flowers.

FLORADORA: Orange red buds opening into a 2 inch camellia type flower.

*GOLDILOCKS: (Pat. 672) Best true golden yellow floribunda. Double flowered like a Miniature Tea Rose. \$1.50.

*PERMANENT WAVE: (Pat. 107) Fluted petals of lively red, free blooming. \$1.25.

*PINK BOUNTIFUL: (Pat. 601) Ovoid, deep reddish pink buds opening to soft pink. Has a nutty fragrance. Hardy and blooms freely. \$1.25.

*PINOCCHIO: (Pat. 484) Buds, rich salmon flushed gold at base, opening to clear pink. Profuse flowering, fragrant. \$1.25.

ROSE ELFE: Clusters of perfect two inch rose pink flowers, floriferous.

*SUMMER SNOW: (Pat. 416) The most prolific of white floribundas, has delicate cream buff buds in large clusters. \$1.00.

*WORLD'S FAIR: (Pat. 362) Clusters of velvety scarlet flowers appearing continuously all summer to fall, fragrant. \$1.25.
